

Kirill Yatsenko

✉ kirillyat@gmail.com

📧 @kirillyat

Experienced software engineer specializing in high-load systems, algorithms, distributed computing, and backend development using Python, Golang and C++.

Skillset

- High-load architecture and distributed systems
- C++, Golang, Python backend development
- Data engineering and pipeline building
- Algorithms and database design
- Monitoring, observability, reliability
- Teamwork and cross-team communication

Languages

	English	C1
	Russian	Fluent
	French	A2

Work Experience

Yandex SWE C++ – Geo discovery app in Yandex Go Sep 2024 - present

- Architected high-performance C++ solutions for user discovery in Yandex Go maps
- Designed new user scenarios for places discovery, improving engagement by cross-team collaboration
- Implemented solutions enabling efficient search and exploration of venues and local experiences

Avito SWE Golang – Billing Core Sep 2023 - Sep 2024

- Optimized financial report aggregation reducing generation time from 10 minutes to 250ms (97.6% improvement)
- Implemented reliable data replication ensuring consistency across analytical databases
- Introduced observability and monitoring solutions preventing financial reporting discrepancies

Yandex SWE Python – Driver Acquisition for Yandex Go Aug 2021 - Sep 2023

- Developed backend services powering core Yandex platform features
- Collaborated with cross-functional teams on system design and optimization

Education

ITMO University – Master in Computer Science
2023 - 2025

Specialization in distributed systems, high-load architecture, and parallel computing

Lomonosov MSU – Bachelor in Computer Science
2018 - 2022

Faculty of Computational Mathematics and Cybernetics, Department of Software Engineering, Moscow (algorithms, systems programming, software design)

Tutoring

ЦЕНТРАЛЬНЫЙ
УНИВЕРСИТЕТ

Central University (July 2025–present)

Higher School of Economics (March 2025–present)

- Delivering lectures and seminars on Python web development and modern frameworks
- Teaching seminars on algorithms, data structures, Python, and C++ while providing hands-on instruction in multiple programming languages and core computer science concepts
